

Line-Up™

STABILIZING AGENT FOR LIQUID FERTILIZERS AND EC PESTICIDES

Available in
2 x 2.5-Gallon Jugs
and 30-Gallon Drums

PRE-TREAT FERTILIZER BEFORE DELIVERY

Mixing Line-Up directly into the fertilizer solution then adding the EC pesticide allows for one convenient application by serving as an intermediate and establishing a chemical bond for the two ingredients.

OVERCOME IONIC CHARGE

Line-Up allows EC-based pesticides to overcome the ionic charge of liquid fertilizers

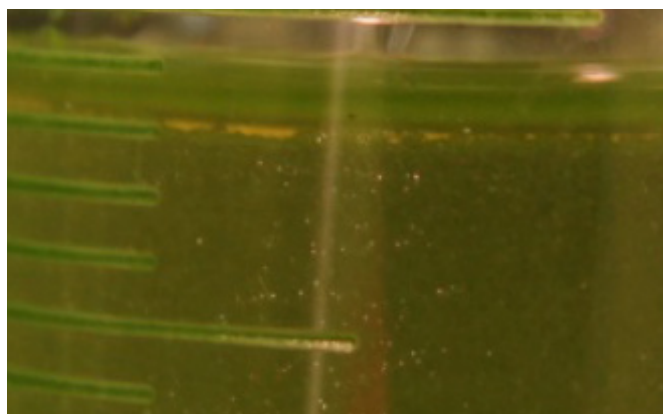

PRE-TREATED FERTILIZER WITH LINE-UP ALLOWS MIXING EC INSECTICIDES AND FUNGICIDES

- For control of wireworms, grubs, maggots and other seedling pests that GMO traits miss
- To form a protective shield against soil insects before they feed on seed and roots
- To assist with Bt-resistant rootworm species
- Controls certain soil borne seedling diseases in corn and soybeans

DIRECTIONS AND USE RATES

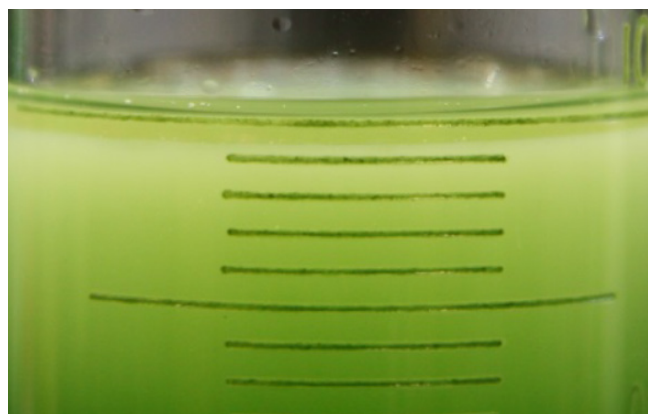

Use 3.2 to 12.8 fluid ounces (or 1:1 ratio) of Line-Up per acre to the EC pesticide per acre rate. Always add Line-Up to the starter fertilizer first, then circulate before adding the EC formulation.

FERTILIZER + EC PESTICIDE WITHOUT LINE-UP

10-34-0 and EC

FERTILIZER + EC PESTICIDE + LINE-UP = DISPERSES EVENLY

10-34-0 and EC

BENEFIT: MORE UNIFORM DISPERSION

Line-Up provides flexibility of using your preferred EC-formulated pesticide delivering the benefits of a more uniform dispersion.
