

Hydro-Wet® Pellets

Turf & Soil Wetting Agent

GENERAL INFORMATION

Hydro-Wet Pellets are designed to supplement regular applications of KALO's Hydro-Wet turf wetting agent in reducing the incidence of dry spot on turfgrass.

Hydro-Wet Pellets reduce the surface tension of water and aid infiltration into hydrophobic soils.

Hydro-Wet Pellets must be applied with a hose-end applicator specifically designed to slowly dissolve the pellet into the water flow. They are often referred to as a "Pellet Applicator" or "Drencher."

USE RATES

Golf Course Greens, Tees and Fine Turf: Place one Hydro-Wet Pellet into an applicator. Apply 2 to 4 minutes per 1,000 sq. ft. of turfgrass. Treat weekly or as needed.

For in-season problems with localized dry spots, extend the application time to 4 to 8 minutes.

To prevent the occurrence of localized dry spots, begin applications at least one month prior to moisture stress.

Note: It is advisable to hand water or irrigate turf area following an application to assist the movement of the active ingredient into the turf.

TECHNICAL INFORMATION

Color & Appearance: Pellet

Odor: Slight

DOT/IMDG Transportation: Not Regulated

Registered With CDPR: N/A

Registered With WSDA: N/A

PRINCIPAL FUNCTIONING AGENTS

Polyoxyethylenepolypropoxypropanol,
glycol butyl ether....50.00%

PACKAGING

4 ounce pellet
30 pellets per case
10 cases per pallet
Item#: HYPEL
