

PIXY™

SEED SHINE & FLOW AID

SPEEDS DRYING • ENHANCES SEED FLOW • SHINES SEED COAT

PIXY™ Shines Seeds Like Marbles!

Just a little dash of **PIXY** shines seed with a fancy appearance and smooth flowing characteristic.

A dry powdered product, **PIXY** is designed to be applied following the liquid seed treat application.

PIXY rates can be adjusted to achieve a wide range of seed lubrication and cosmetic performance.

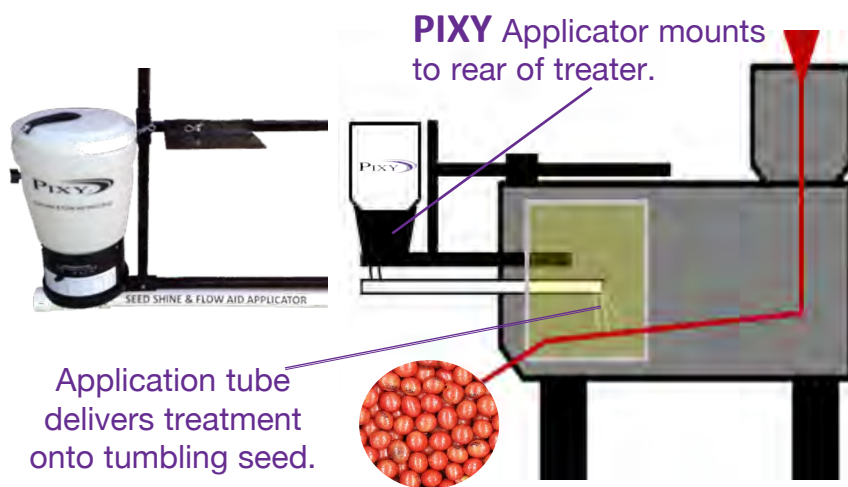

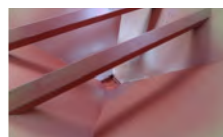

When Applying PIXY in Continuous Treating Systems

The ideal **PIXY** application zone is within the final third of the secondary mixing (polishing drum) system after liquid seed treatment has been substantially distributed on the seed.

A simple treater mounted applicator is available and adaptable to most typical seed treating systems.

PIXY treated seed, in a commercial operation, flowing and handling with virtually no bridging or impact from treatment. In this instance, the operator was not required to use the bin vibrator to empty the treated seed tank.

Growers Recognize the Value of PIXY Treated Seed as Soon as They See It! Seeds Look Better and Plant Better!

PIXY SUGGESTED USE RATE: 0.2 - 0.6 oz. per 100 lbs of seed. *The higher the rate, the more the shine!*
