a Brief Video Introduction
To the **NOVO** System.
www.NovoSeedCare.com

NOVO® is a Seed Care Prescription Management System

Prescription Management means localizing prescription seed treatments from farm-to-farm and field-to-field as needed to meet the agronomic and management needs of each producer. With **NOVO** it also means the ability to dose on a per-seed basis, delivering efficacious levels of active ingredient per seed regardless of the seed size.

- **NOVO** sits beside, or near, the seed treater and is engineered to integrate work with all brands of slurry-based seed treating systems.
- **NOVO** automates the precise mixing of localized seed treatment prescriptions and transfers the ready-to-apply mix to the seed treater application tank.
- **NOVO** is integrated with the patented Size Indexed Rate Adjustment (**SIRA™**) calculator used to determine seed size adjusted application rates.
- **NOVO** measures products by weight and documents every treatment job with a detailed mixing record including SIRA application rate instructions.
- **NOVO** is available in 4 and 8 port models for direct connect product feeds from drums and totes and also accommodates hand-added products.
- **NOVO** capabilities feature multi-crop functionality with virtually unlimited prescription capability.

NOVO AT WORK

- 1. MEASURES & MIXES**
The **NOVO** measures and mixes products based on local prescriptions. Individual products are pumped directly to **NOVO** using standard drum/tote pumps or are hand-added by the operator when prompted.
- 2. TRANSFERS TO TREATER**
Next **NOVO** transfers the slurry to the seed treater application slurry tank.
- 3. DOCUMENTS THE JOB**
Throughout the process, **NOVO** documents detailed mix and job records which are automatically printed on-site and archived in an electronic data base for future reference.

Operating NOVO Is Simple With Touch Screen Interface

Step 1
Select Prescription
