

Drift-X™

Deposition Agent / Dispersant

GENERAL INFORMATION

Drift-X is a proprietary drift management adjuvant that is easy to use and does not require any special mixing or handling.

When used properly, Drift-X reduces spray drift and enhances deposition by improving canopy coverage and penetration, reducing droplet bounce, and minimizing formation of small droplets that may be prone to off-target drift or evaporation.

Drift-X improves spray coverage, and reduces drift and evaporation of pesticides, fertilizers and nutrients being applied by ground or air applications.

USE RATES

Drift-X may be used with flat fan, hollow cone, and coarse spray nozzles. It is suitable for use with the latest nozzle technology including air inclusion, air induction, and venturi-type air induction nozzles.

Ground/Aerial Use Rates for Drift Management and Deposition

Spray Volume	Rate of Drift-X*
<10 GPA	2-3 oz./acre
10-25 GPA	3-4 oz./acre

*Rates work with all nozzle types.

For Spray Volumes Greater Than 25 GPA: Use Drift-X at a rate of 0.25% v/v (1 quart per 100 gallons of spray solution). Do not exceed a use rate of 1% v/v.
